

Tools Designed Specifically for Grapes, Pomace and Must

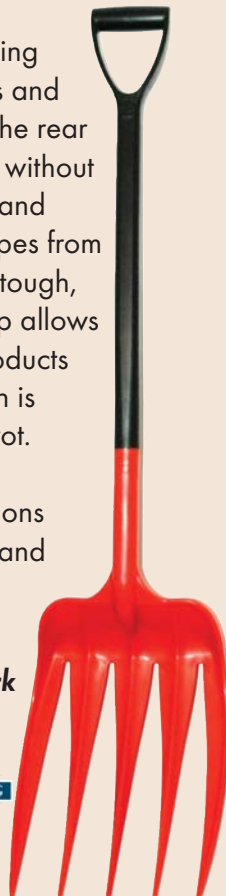

Unifork, Unirake and Hygiene Shovel

These products were designed specifically for the handling of grapes, must and pomace and are widely used at wineries, vineyards and orchards throughout Europe. These light-weight tools can help vineyards and wineries increase their productivity and reduce labor costs by moving and processing grapes faster and more efficiently than ever before.

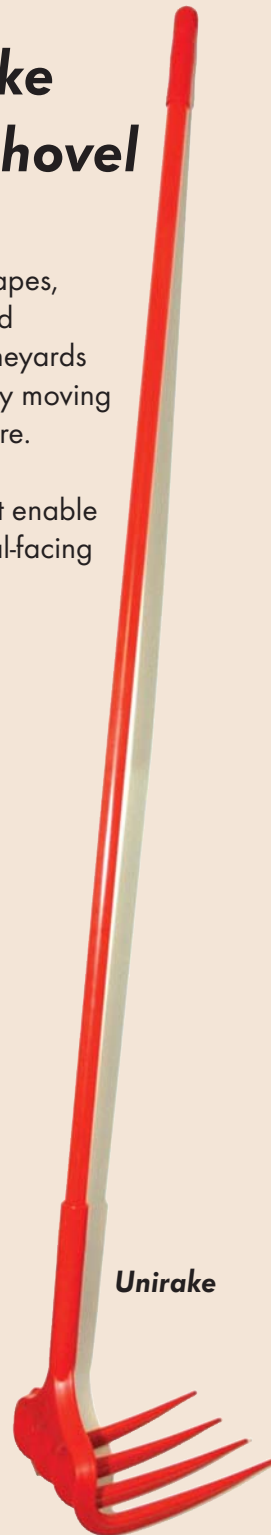

The Unifork and Unirake have tapered and star-profiled tines that enable easy piercing and gathering of grapes and pomace. The material-facing surface of the tines are flat, not round, giving these tools superior handling qualities compared to anything else on the market – and it won't damage or scratch stainless steel tanks and vats.

The curved back of the Unifork aids in removing grapes and pomace from the bottom of tanks and vats. The tapered tines guide the matter into the rear of the fork allowing large loads to be moved without spillage. The Unirakes' long five foot handle and reinforced tines makes it easy to remove grapes from elevated bins. The Solid One-Piece Shovel is tough, light-weight and easy to clean. Its large scoop allows you to quickly move grapes and must. All products are made of high-grade polypropylene which is virtually unbreakable and immune to rust or rot.

These tools are approved under FDA regulations for direct food contact. The Unifork, Unirake and Hygiene Shovel can handle all your grape, olive and fruit handling needs.
